WORK EXPERIENCE

Gojek

Jakarta, Indonesia

Software Development Engineer, Backend

Sep 2024 – Present

- Led the price-indicator project to signal surge and price drops, improving user trust and increasing bookings by 5%; built with Apache Flink & Kafka to process ~20k msg/s.
- Led the re-architecture of the Transport Pricing System into a unified service, handling ~18k pricing transactions per minute, improving reliability, and reducing cloud costs by \$5K/month.
- Integrated a Demand/Supply ratio model into Transport services to enhance dynamic service type ranking.
- Designed backend services to improve latency and reduce failure rates, ensuring high availability and system reliability; reduced incident rates by 50% and decreased estimate latency by ~200ms.
- Participated in on-call rotations, leading incident response and root cause analysis to improve service uptime and operational readiness.
- Led the cancellation fee system for driver cancellations post-threshold, coordinating cross-functional stakeholders including Data Science, Maps Team, and Driver teams.
- **Techstack:** Golang, Ruby on Rails, Google Cloud Platform, Sidekiq, PostgreSQL, Kubernetes, Docker, Tencent, Kafka, Apache Flink, Redis

Tiket.com

Jakarta, Indonesia

Software Development Engineer II, Backend

Sep 2022 – Sep 2024

- Architected a modular refundable option system for Attractions, increasing conversion rate (CVR) by 2%.
- Led integration with a third-party supplier to onboard new products, expanding inventory by 10,000+ items and increasing new user engagement by 41%.
- Designed and scaled seat configuration enhancements to support 200K+ concurrent orders.
- Built a price-drop detection system to identify significant inventory changes, preventing commission losses of up to IDR 50M.
- Designed database schemas and system architecture for a new seating system, improving scalability and maintainability.
- **Techstack:** Golang, Java, Spring Boot, Google Cloud Platform, Kafka, MongoDB, Redis, Kibana, NoSQL.

Bukalapak

Jakarta, Indonesia

Software Development Engineer, Backend

Apr 2021 – Sep 2022

- Increased marketplace traffic by building a sitemap generator, redirection system, and keyword enhancement pipeline to improve SEO performance.
- Refactored legacy microservices by redesigning database schemas and re-architecting code to align with clean architecture principles, achieving 100% unit test coverage.
- Pioneered a Layout Management and Page Builder platform, enabling faster homepage creation across subsidiaries and increasing organic sessions by up to 240%.
- **Techstack:** Golang, Ruby on Rails, HAProxy, Kubernetes, MYSQL, Redis, Kibana Kafka, Elasticsearch, Datadog, Google Cloud Platform, Google Pubsub, NoSQL, AWS

GDPLabs

Jakarta, Indonesia

Software Development Engineer

Oct 2020 – Apr 2021

- Build referral & recruitment system for BCALife, using Spring and React.
- Revamped the recruitment portal with server-side rendering to improve SEO and Google indexability.
- **Techstack:** React, NextJS, Typescript, Apollo, Webpack, Spring Boot, MySQL

EDUCATION

Electronic Engineering Polytechnic Institute of Surabaya (EEPIS)

Surabaya, Indonesia

Bachelor of Engineering in Informatics Engineering

Aug 2016-Sep 2020

- **Thesis:** Implementation of Automatic Clustering in Parallel Computing with Multi-Threading and Socket Programming.
- Created a distributed system to reduce Automatic Clustering Computation. The systems are mainly built on Java. The result is proven to reduce the computation time of automatic clustering in Machine Learning by **60%**.
